The association covers many and varied content areas, such as:
Propulsion systems, fuel and electric propulsion systems, optical systems, day and night cameras, payloads, lasers, LIDARS, simulators for autonomous systems and field and city management, aerial, maritime and land autonomous systems, control and monitoring systems and communication systems.
The association creates a space for training and professional upscaling. The association conducts conferences, seminars, workshops, and courses, as well as collaboration with universities around the world.
The association in Israel is a branch of AUVSI and conducts joint exhibitions and support for companies in the various frameworks. The society established a holistic approach for UA regulation and is collaborating with the PM office to establish acceptable regulation for autonomous systems.
